

Declaration on Biodiversity

Faraday understands that biodiversity and climate change are major environmental issues in human society today, they are also crucial factors for sustainable corporate operations. Therefore, Faraday responds to the United Nations “Convention on Biological Diversity (CBD)”, committing to the goals of achieving “Zero net deforestation”, “No Net Loss of nature and biodiversity”, and “Net Positive Impact” by 2050. We actively collaborate with stakeholders to proactively promote activities that support biodiversity.

Faraday’s implementation guidelines

- Adhere to local regulations related to biodiversity at operating bases and actively respond to relevant international initiatives or actions.
- Avoid establishing operating bases or conducting operations in global or national key areas for biodiversity. Regularly analyze potential ecological impacts and develop mitigation measures including avoidance, minimization, restoration, and offset.
- Support environmental education activities that promote awareness of environmental sustainability and ecological conservation.
- Require supply chain partners to comply with relevant biodiversity regulations and collaborate on the development of feasible environmental sustainability technologies.
